Technology, War and Fascism Nov 06 2021 Herbert Marcuse is one of the most influential thinkers of our time. Born in Berlin, Marcuse studied philosophy with Husserl and Heidegger at the Universities of Freiburg and Berlin. Marcuse's critical social theory ingeniously fuses phenomenology, Freudian thought and Marxist theory; and provides a solid ground for his reputation as the most crucial figure inspiring the social activism and New Left politics of the 1960s and 1970s. The largely unpublished work collected in this volume makes clear the continuing relevance of Marcuse's thought to contemporary issues. The texts published here, dealing with concerns during the period 1942-1951, exhibit penetrating critiques of technology and analyses of the ways that modern technology produces novel forms of society and culture with new modes of social control. The material collected in *Technology, War and Facism* provides exemplary attempts to link theory with practice, to develop ideas that can be used to grasp and transform existing social reality. *Technology, War and Fascism* is the first of six volumes of Herbert Marcuse's *Collected Papers* to be edited by Douglas Kellner. Each volume is a collection of previously un-published or uncollected essays, unfinished manuscripts and letters by one of the greatest thinkers of our time. *Foreign Affairs Research Papers Available* Feb 26 2021

Paper Technology and Industry Nov 25 2020

Disability and Technology Jun 01 2021 This edited collection brings together keynote articles from the journal *Disability & Society* to provide a comprehensive and thought-provoking exploration of the place of technology in disabled people's lives, documenting and analysing the growing impact of technology on disability and society over recent decades. The authors explore theoretical, empirical and moral dilemmas that arise with the changing relationship between technological change and the lives, aspirations and possibilities of disabled people. The volume is organised into three parts which consider early foundational work connecting disability and technology; key empirical studies related to the optimum use of technologies for independence and inclusion; and new moral and social dynamics thrown up by technological developments for disabled people's lives.

Towards a Sustainable Paper Cycle Sub-Study Series Assessment of Bleaching Technology and Emission Control in the Pulp and Paper Industry Apr 18 2020

Handbook of Paper and Paperboard Packaging Technology May 20 2020 The definitive industry reference on the paper and paperboard packaging sector. Now in a fully revised and updated second edition, this book discusses all the main types of packaging based on paper and paperboard. It considers the raw materials, the manufacture of paper and paperboard, and the basic properties and features on which packaging made from these materials depends for its appearance and performance. The manufacture of twelve types of paper- and paperboard-based packaging is described, together with their end-use applications

and the packaging machinery involved. The importance of pack design is stressed, as well as how these materials offer packaging designers opportunities for imaginative and innovative design solutions. Environmental factors, including resource sustainability, societal and waste management issues are addressed in a dedicated chapter. The book is directed at readers based in companies which manufacture packaging grades of paper and paperboard, companies involved in the design, printing and production of packaging, and companies which manufacture inks, coatings, adhesives and packaging machinery. It will be essential reading for students of packaging technology and technologists working in food manufacturing who are users of paper and paperboard packaging products. Praise for the First Edition 'This book is a valuable addition to the library of any forward-looking company by providing in-depth coverage of all aspects of packaging which involve the most ecologically acceptable material, namely paper and paperboard.'—International Journal of Dairy Technology '...a welcome contribution to a field where coverage was previously limited to subject-specific books... or to single chapters in textbooks on broader aspects of packaging technology.'—Packaging Technology and Science

Paper and Paperboard Packaging Technology Mar 30 2021 This book discusses all the main types of packaging based on paper and paperboard. It considers the raw materials and manufacture of paper and paperboard, and the basic properties and features on which packaging made from these materials depends for its appearance and performance. The manufacture of twelve types of paper- and paperboard-based packaging is described, together with their end-use applications and the packaging machinery involved. The importance of pack design is stressed, and how these materials offer packaging designers opportunities for imaginative and innovative design solutions. Environmental and waste management issues are addressed in a separate chapter. The book is directed at those joining companies which manufacture packaging grades of paper and paperboard, companies involved in the design, printing and production of packaging, and companies which manufacture inks, coatings, adhesives and packaging machinery. It will be essential reading for students of packaging technology.

Encyclopedia of Chemical Technology Dec 15 2019

Anaerobic Technology in Pulp and Paper Industry Jul 22 2020 This book presents a state-of-the-art report on the treatment of pulp and paper industry effluents using anaerobic technology. It covers a comprehensive range of topics, including the basic reasons for anaerobic treatment, comparison between anaerobic and aerobic treatment, effluent types suitable for anaerobic treatment, design considerations for anaerobic treatment, anaerobic reactor configurations applied for treatment of pulp and paper industry effluents, present status of anaerobic treatment in pulp and paper industry, economic aspects, examples of full scale installations and future trends.

Technology and the Soul Nov 13 2019 C. G. Jung famously declared that it is not the psyche that is in us, but rather we who are in the psyche. Updating this insight, the second volume of Wolfgang Giegerich's Collected English Papers examines what must be regarded as the most all-encompassing presence of our lives today: technological civilization. Living within technology, we now find that what we had formerly regarded as psychological phenomena—our feelings and emotions, images and dreams—have been superseded by phenomena bearing the predicates "artificial," "manufactured," and "virtual." Television, the World Wide Web, and the nuclear bomb are cases in point. Far from being mere things among things, each of these has transformed the whole of man's world-relation. Though deplored by many as soulless on this account, these phenomena, it may be argued, are the real gods, the real archetypes, of the soul today. Psychologically it is not what we think and feel about them that counts, but what they think, what they feel.

Paper Chemistry and Technology Sep 23 2020 The production of forestry products is based on a complex chain of knowledge in which the biological material wood with all its natural variability is converted into a variety of fiber-based products, each one with its detailed and specific quality requirements. This four volume set covers the entire spectrum of pulp and paper chemistry and technology from starting material to processes and products including market demands. Supported by a grant from the Ljungberg Foundation, the Editors at the Royal Institute of Technology, Stockholm, Sweden coordinated over 30 authors from university and industry to create this comprehensive overview. This work is essential for all students of wood science and a useful reference for those working in the pulp and paper industry or on the chemistry of renewable resources.

Environmentally Friendly Technologies for the Pulp and Paper Industry Oct 25 2020 Solving the pulp and paper industries' environmental problems is essential to maintaining the forest industry and accommodating the changing economic needs of forest communities. This book explores the construction of new mills--operating on new technology that does not produce pollutants--which are vital to the pulp and paper industry.

Advances in Tourism, Technology and Systems Feb 15 2020 This book features a collection of high-quality research papers presented at the International Conference on Tourism, Technology & Systems (ICOTTS 2020), held at the University of Cartagena, in Cartagena de Indias, Colombia, from 29th to 31st October 2020. The book is divided into two volumes, and it covers the areas of technology in tourism and the tourist experience, generations and technology in tourism, digital marketing applied to tourism and travel, mobile technologies applied to sustainable tourism, information technologies in tourism, digital transformation of tourism business, e-tourism and tourism 2.0, big data and management for travel and tourism, geotagging and tourist mobility, smart destinations, robotics in tourism, and information systems and technologies.

Fundamental & Applied Problems of Terahertz Devices and Technologies Mar 10 2022 This book brings together seven selected best papers presented at the 2014 Russia–Japan–USA Symposium on Fundamental and Applied Problems of Terahertz Devices and Technologies (RJUS TeraTech-2014), which was held at the University of Buffalo, New York, USA on 17–21 June 2014. As the third in the series of annual meetings, RJUS TeraTech-2014 continues to be an excellent platform for researchers to exchange their recent original results, and to deal with the technical challenges and barriers of

transitioning the research results into the THz system-level applications. The symposium focuses on 2 main areas, namely, interaction of THz radiation with micro- and nano-structures, and advanced solid-state THz emitters and sensors. Leading experts from academia, industry, and government agencies from three countries, including USA, Japan, and Russia, contributed to the collection of research results and developments. This book, covering issues ranging from basic Thz-related phenomena to applications in sensing, imaging, and communications, contains some ground-breaking works in the industry, and will be a useful reference for device and electronics engineers and scientists. Contents: Terahertz Sensing Technology (M Shur) Detection of Terahertz Radiation by Dense Arrays of InGaAs Transistors (D M Yermolayev, E A Polushkin, S Yu Shapoval, V V Popov, K V Maremyanin, V I Gavrilenko, N A Maleev, V M Ustinov, V E Zemlyakov, V I Yegorkin, V A Bespalov, A V Muravjov, S L Romyantsev and M S Shur) Investigation and Fabrication of the Semiconductor Devices Based on Metamorphic InAlAs/InGaAs/InAlAs Nanoheterostructures for THz Applications (D V Lavrukhin, A E Yachmenev, R R Galiev, A S Bugaev, Y V Fedorov, R A Khabibullin, D S Ponomarev and P P Maltsev) Peculiarity of Terahertz Waves Scattering (I N Dolganova, S O Yurchenko, V E Karasik and V P Budak) Rashba Effect and Beating Patterns in the THz Magneto-Photoresponse of a HgTe-Based Two-Dimensional Electron Gas (M Pakmehr, C Brüne, H Buhmann, L W Molenkamp and B D McCombe) Characterization of High Mobility InAlAs/InGaAs/InAlAs Composite Channels by THz Magneto-Photoresponse Spectroscopy (M Pakmehr, B D McCombe, O Chiatti, S F Fischer, Ch Heyn and W Hansen) Quantum Dot Solar Cells with Nanoscale Barriers Around Dots: Experiment and Two-Diode Model Analysis (Y Li, A Sergeev, N Vagidov, V Mitin and K Sablon) Readership: Scientists, engineers and researchers interested in terahertz materials, devices, systems and applications, as well as graduate students working on terahertz science and technology. Keywords: Terahertz Devices and Technologies; Terahertz Radiation; Micro- and Nanostructures; Emitters and Sensors

Technology and the Virtues Jan 16 2020 The 21st century offers a dizzying array of new technological developments: robots smart enough to take white collar jobs, social media tools that manage our most important relationships, ordinary objects that track, record, analyze and share every detail of our daily lives, and biomedical techniques with the potential to transform and enhance human minds and bodies to an unprecedented degree. Emerging technologies are reshaping our habits, practices, institutions, cultures and environments in increasingly rapid, complex and unpredictable ways that create profound risks and opportunities for human flourishing on a global scale. How can our future be protected in such challenging and uncertain conditions? How can we possibly improve the chances that the human family will not only live, but live well, into the 21st century and beyond? This book locates a key to that future in the distant past: specifically, in the philosophical traditions of virtue ethics developed by classical thinkers from Aristotle and Confucius to the Buddha. Each developed a way of seeking the good life that equips human beings with the moral and intellectual character to flourish even in the most unpredictable, complex and unstable situations--precisely where we find ourselves today. Through an examination of the many risks and opportunities presented by rapidly changing technosocial conditions, Vallor makes the case that if we are to have any real hope of securing a future worth wanting, then we will need more than just better technologies. We will also need better humans. *Technology and the Virtues* develops a practical framework for seeking that goal by means of the deliberate cultivation of technomoral virtues: specific skills and strengths of character, adapted to the unique challenges of 21st century life, that offer the human family our best chance of learning to live wisely and well with emerging technologies.

Technology in Mathematics Teaching Jan 20 2023 This book comprises chapters featuring a state of the art of research on digital technology in mathematics education. The chapters are extended versions of a selection of papers from the Proceedings of the 13th International Conference on Technology in Mathematics Teaching (ICTMT-13), which was held in Lyon, France, from July 3rd to 6th. ICTMT-13 gathered together over one hundred participants from twenty countries sharing research and empirical results on the topical issues of technology and its potential to improve mathematics teaching and learning. The chapters are organised into 4 themed parts, namely assessment in mathematics education and technology, which was the main focus of the conference, innovative technology and approaches to mathematics education, teacher education and professional development toward the technology use, and mathematics teaching and learning experiences with technology. In 13 chapters contained in the book, prominent mathematics educators from all over the world present the most recent theoretical and practical advances on these themes This book is of particular interest to researchers, teachers, teacher educators and other actors interested in digital technology in mathematics education.

Blockchain technologies and IP ecosystems: A WIPO white paper Mar 18 2020 Blockchain is one of the frontier technologies significantly affecting the way businesses operate while revolutionizing numerous innovation ecosystems, including the intellectual property (IP) ecosystem. This white paper explores potential applications and opportunities presented by blockchain to the existing IP ecosystems. It also identifies the challenges and issues that should be addressed to determine feasibility and cost-efficiency.

Computer Science and Information Technology Solved Papers GATE 2022 Jul 14 2022 1. The book is prepared for the preparation for the GATE entrance 2. The practice Package deals with Computer Science & Information Technology 3. Entire syllabus is divided into chapters 4. Solved Papers are given from 2021 to 2000 understand the pattern and build concept 5. 3 Mock tests are given for Self-practice 6. Extensive coverage of Mathematics and General Aptitude are given 7. Questions in the chapters are divided according to marks requirements; 1 marks and 2 marks 8. This book uses well detailed and authentic answers Get the complete assistance with "GATE Chapterwise Solved Paper" Series that has been developed

for aspirants who are going to appear for the upcoming GATE Entrances. The Book "Chapterwise Previous Years' Solved Papers (2021-2000) GATE – Computer Science & Information Technology" has been prepared under the great observation that help aspirants in cracking the GATE Exams. As the name of the book suggests, it covers detailed solutions of every question in a Chapterwise manner. Each chapter provides a detailed analysis of previous years exam pattern. Chapterwise Solutions are given Engineering Mathematics and General Aptitude. 3 Mock tests are given for Self-practice. To get well versed with the exam pattern, Level of questions asked, conceptual clarity and greater focus on the preparation. This book proves to be a must have resource in the solving and practicing previous years' GATE Papers. TABLE OF CONTENT
Solved Paper 2021- 2012, Engineering Mathematics, Computer Architecture Organization, Programming & Data Structure, Algorithm, Theory of Computation, Compiler Design, Operating System, Database, Digital Logic, Software Engineering, Computer Networks, Web Technologies, General Aptitude, Crack Paper (1-3).

Background Papers for Innovative Biological Technologies for Lesser Developed Countries Apr 11 2022

Pulp Technology and Treatment for Paper Aug 03 2021

Modern Technology of Pulp, Paper and Paper Conversion Industries Jun 20 2020 The paper conversion sectors are assuming increasingly important place in the life of every nation. Conversion technology is being evolved continuously for having better conversion, handling, transportation, preservation and usage of materials. Paper and Pulp industry plays a vital role towards conversion. Pulping is a process of delignification removing lignin from wood while leaving cellulose fibres intact. Pulp and paper can be produced from many resources like; Eta Reed, bamboo, bagasse, elephant grass, etc. Growing population and increased demand of paper products has created raw material shortage all over the world especially in developing countries. Consequently agricultural residues and farm wastes are the only hope for further pulp papermaking in these countries. However, technology is evolving that holds promise for using waste or recycled paper and, in some cases, even plastics to make an array of high performance composite products that are in themselves potentially recyclable. Pulp and paper industry is one of the largest industries in India today, which consumes huge quantity of water. As the product does not contain any water most of the water used in the process reappears as waste. Therefore the waste water is used in crop irrigation which will solve both problems i.e. industrial waste solution and irrigation. The Indian paper industry has close linkages with economic growth as higher industrial output leads to increased demand for industrial paper for packaging, increased marketing spend benefits the newsprint and value added segments, and increased education and office activities increase demand for writing and printing paper. It is estimated that there is an economic growth of 8.5% for India which will benefit the demand for paper. The major contents of the book are dry process hard boards from recycled newsprint paper fibres, abrasive kraft base paper from sun hemp (*Crotalaria jauncia*), production of soda semi chemical pulp from *Sesbania sesban* (Linn.) Merr., high yield pulps from eta reed, the influence of clay addition on flotation deinking, alternative uses for waste/paper in wood based composite products, deinking of flexo graphic newsprint: use of ultra filtration to close the water loop etc. This book also consists of alkaline pulping chemistry, manufacturers, suppliers of plant & machinery and allied products, manufacturers and suppliers of raw materials, imported pulp manufacturers & suppliers imported pulp, Indian agents for imported pulp etc. In view of the close linkage between paper and conversion industry we have tried to come out with this unique book containing relevant and useful information in both these industries. We have tried to make it most exhaustive first giving details, then presenting and dividing in different chapter to understand better. Thus we have tried to fill the vacuum that existed fill now. This book will be useful for paper chemists as well as conversion industries.

Technology and Labor in Pulp, Paper, Paperboard and Selected Converting Industries Jan 08 2022

Ulsi Front-end Technology: Covering From The First Semiconductor Paper To Cmos Finfet Technology Oct 05 2021

The main focus of this book is ULSI front-end technology. It covers from the early history of semiconductor science & technology from 1874 to state-of-the-art FINFET technology in 2016. Some ULSI back-end technology is also covered, for example, the science and technology of MIM capacitors for analog CMOS has been included in this book. Contents: Preface Author Biography Introduction to the History of Semiconductors History of MOS Technology CMOS Switching Speed Characterization and An Overview Regarding How to Speed Up CMOS Low Power CMOS Engineering Analog CMOS Technology Index Readership: The book is useful for researchers in semiconductor technology especially practicing engineers. Keywords: Semiconductor; Integrated Circuits; CMOS; High Speed; Low Power; Digital; Analog; Mixed-Signal; Planar Technology; FINFET; MIM Capacitor Review: Key Features: The book is readable for beginners The book is useful for semiconductor technology historians The book is useful for practicing engineers

Journal of Science and Technology, Kumasi, Ghana Oct 13 2019

Technology of Paper Recycling May 12 2022 This book covers the technology of the recovery of secondary fibre for its use in paper and board manufacture. The editor, who has had substantial practical experience of designing and commissioning paper recycling plants all over the world, leads a team of experts who discuss subjects including sourcing, characterisation, mechanical handling and preparation and de-inking.

Papers Presented at the Expert Consultation on Sustainable Fishing Technologies and Practices Dec 07 2021 The publication contains the 17 invited papers which were presented and discussed at the Expert Consultation on Sustainable Fishing Technologies and Practices held in St. John's, Newfoundland, Canada (1-6 March 1998). The papers cover four broad categories. The first section deals with the methodologies for development and assessment of the effectiveness of fishing gears. The second section deals with the review of impact assessments of fishing activities on the marine habitat. Representative examples of sustainable fishing technologies and practices are dealt with in the third part and finally the

fourth and final section deals with the introduction and implementation of sustainable technologies and practices.

Papers and Proceedings of the Advanced Technology Program's International Conference on the Economic Evaluation of Technological Change Nov 18 2022

Essays in Technology Management and Policy Sep 16 2022 This book examines the manner in which successful firms develop, transfer, protect, and capture value from technological innovation. In essence, it is about “knowledge management”, which lies at the foundation of firm level competitive advantage in today's global economy. The essays contain some of the fundamental contributions to the field of knowledge management by one of its best-known thinkers; they also constitute an immensely practical guide for those managers who wish to look below the surface of what is going on in Silicon Valley and elsewhere. Contents: Capturing Value from Technological Innovation Sustaining Value Creation and Capture Licensing, Technology Transfer, and the Market for Know-How Technological Change and Competition Policy Technological Innovation and the Theory of the Firm Readership: Professionals and academics in management studies.

Keywords: Reviews: “Anyone interested in strategy or policy towards knowledge industries will learn much from this collection, written throughout with the elegance and lucidity which is a hallmark of Teece's work.” **Research Policy Papers and Proceedings of a Colloquium on the Effects of International Technology Transfers on U.S. Economy** Oct 17 2022 *The Implications of Cost-effectiveness Analysis of Medical Technology : Background Paper #2* Apr 30 2021

Paper Products Physics and Technology Dec 27 2020 "The production of forestry products is based on a complex chain of knowledge in which the biological material wood with all its natural variability is converted into a variety of fiber-based products, each one with its detailed and specific quality requirements. This four volume set covers the entire spectrum of pulp and paper chemistry and technology from starting material to processes and products including market demands. Supported by a grant from the Ljungberg Foundation, the Editors at the Royal Institute of Technology, Stockholm, Sweden coordinated over 30 authors from university and industry to create this comprehensive overview. This work is essential for all students of wood science and a useful reference for those working in the pulp and paper industry or on the chemistry of renewable resources."--Publisher's description.

The Complete Technology Book on Pulp & Paper Industries Sep 04 2021 The pulp and paper industry continues to expand at a phenomenal rate and it has an important role to play on the Indian economy. This imposes a difficult problem of selection. Since the amount of material that can be included in a single volume is obviously limited. Careful thought has been given to the selection with the purpose of presenting that material which will be of the greatest interest to the greatest numbers. Paper is one of the major components of urban solid waste (household and commercial waste) and has a potential resource value when collected and reused. Recycling of the waste paper has been a practice that has prevailed in the paper industry since its inception and therefore continues. The preservation of forests and increasing environmental awareness has focussed research on exploration of new fibrous resources and less toxic pulping and bleaching processes. The use of non woody already account for 9.1% of total world papermaking capacity. A variety of non woody plant fibres are used for papermaking. Paper converting refers to the processing of raw paper to produce improved grade of paper or a finished paper article. There are two types of paper converting; wet converting and dry converting. The Indian paper industry has close linkages with economic growth as higher industrial output leads to increased demand for industrial paper for packaging, increased marketing spend benefits the newsprint and value added segments, and increased education and office activities increase demand for writing and printing paper. It is estimated that there is an economic growth of 8.5% for India which will benefit the demand for paper. This book basically comprises of bio refiner mechanical pulping of bast type fibres, use of trichromatic colourimetry for measurement of brightness and yellowness of bleached pulps, finishing and converting, coating equipment, chemical and additives in papermaking, mixed pulping of jute stick and other agricultural residues etc. This book also comprises of the list of manufacturers, suppliers of plant & machinery and allied products, list of manufacturers and suppliers of raw materials, imported pulp manufacturers & suppliers imported pulp, Indian agents for imported pulp etc. This informative book will be helpful for paper technologist, paper chemists and scientists related to paper field.

Technoscience and Postphenomenology Feb 21 2023 Friis and Crease capture Postphenomenology, a new field that has attracted attention among scholars engaged in technology studies. Contributors to this edited collection seek to analyze, clarify, and develop postphenomenological language and concepts, expand the work of Don Ihde, the field's founder, and scout into fields that Ihde never tackled. Many of the contributors to this collection had especially close ties to Ihde and have benefited from close work with him. This combined with the distinctive diversity of the contributors—18 people from 10 different countries—enables this volume to put on display the diversity of content and styles in this young movement.
