*Bamboos of India May 25 2020 Bamboo occupies an unparalleled position in the plant kingdom in terms of its distribution, diversity and uses in the tropics and subtropics. In addition to featuring prominently in the lives of rural communities, particularly in Asia, it continues to find new applications in such wide ranging areas as paper and rayon manufacture; construction; architecture; engineering; handicrafts; food and medicine. Within Asia, India is second only to China in terms of the quantities and varieties of bamboo species found in the country. However, as in many other countries, information on this subject is generally inadequate and inaccessible. Contradictory reports on various aspects of bamboos, especially relating to taxonomic and phytogeographic observations, further add to the confusion regarding classification. There is thus an urgent need for a review of the current literature and a compilation of information on the various species of bamboo, including their synonyms. This compilation by K.K. Seethalakshmi and M.S. Muktesh Kumar, scientists specializing in plant physiology and taxonomy respectively at the Kerala Forest Research Institute, seeks to fulfil this need. Based primarily on a literature survey, it provides a comprehensive and holistic account of 128 bamboo species belonging to 18 genera occurring in India. By synthesizing and consolidating the work done so far on each of the covered species, it is expected to illuminate current information gaps and to provide a solid foundation for further work in this area.*

*Danger on the Page Dec 20 2019 Although fiction writers must concern themselves with "big picture" issues such as plot, theme, and character development, much of the day-to-day work of writing involves finding answers to seemingly minor questions: How should I describe the exterior of a house? How can I construct the voice of a historical narrator with authenticity? How should I depict a physically atypical character? Few books on the market address the problems and opportunities present in these and other questions, yet they are the ones that most writers grapple with on a daily basis. Danger on the Page: A Fiction Writer's Guide to Sex, Violence, Dead Narrators, and Other Challenges identifies and explores some of the more common and intractable situational challenges of fiction writing, with chapters grouped into the general subject areas such as scenes, characters, points of view, and settings. Shawver delves into the pitfalls and opportunities of writing about sex, violence, sports, and love; he examines writing from the perspective of a different race, gender, or species; he interrogates conventional beliefs about the use of brand names, the description of architecture, and the portrayal of nature. Throughout, he gives dozens of examples from both literary and commercial fiction so readers can borrow (or reject) other writers' techniques and explore the myriad challenges of fiction writing on their own. A lively and witty approach to a diverse range of specific writing issues, Shawver's book will appeal especially to intermediate-level writers seeking to bring their craft to the next level.*

*CRC Handbook of Tables for Applied Engineering Science Feb 26 2023 New tables in this edition cover lasers, radiation, cryogenics, ultra-sonics, semi-conductors, high-vacuum techniques, eutectic alloys, and organic and inorganic surface coating. Another major addition is expansion of the sections on engineering materials and compos-ites, with detailed indexing by name, class and usage. The special Index of Properties allows ready comparisons with respect to single property, whether physical, chemical, electrical, radiant, mechani-cal, or thermal. The user of this book is assisted by a comprehensive index, by cross references and by numerically keyed subject headings at the top of each page. Each table is self-explanatory, with units, abbreviations, and symbols clearly defined and tabular material subdivided for easy reading.*

*Applied Research Methods - Mergers and acquisitions (M&A) Jul 27 2020 Research paper from the year 2011 in the subject Business economics - Investment and Finance, grade: 87 %, University of Sunderland, course: Applied Research Methods for Business and Management, language: English, abstract: Throughout the last decades, mergers and acquisitions (M&A) are achieving increasing importance in the corporate world. There are many motives such as to increase the market power and competitive advantage, to reduce dependence on suppliers, to gain fast access to new market etc. why managers adopting an acquisitions strategy. Nevertheless, many M&As have been unsuccessful in the past due to incompetent managers, poor ethics, inadequate analysis prior the deal, and diversification away from the core business of the company. Therefore, a careful industry, target company, and product portfolio analysis must be made before the deal. The literature provides different frameworks and analytical tools that can be used in the M&A process in order to avoid typical risks. However, because of the uniqueness of each M&A deal, it is important to gain further insights in these transactions in order to provide an appropriate guideline on how to select an optimal M&A target.*

*Forest Resource Economics and Finance Mar 23 2020 Forest Resource Economics and Finance is intended for undergraduate forestry students, but practicing foresters and policy analysts will also find it a useful reference. The text*

*emphasizes economics as a way of thinking in which we compare added costs and benefits of actions in order to maximize net benefits. With the basics of capital theory, readers learn how to evaluate forestry investments in a way that embraces important environmental factors. Another key feature is a focus on analyzing current conflicts and tradeoffs that will continue to be prominent forestry issues in the 21st century: free market policies versus different levels of government intervention, economic development versus environmental conservation, private property rights versus public amenity rights, and timber versus non-timber outputs. This text also addresses additional topics not often found in other forest economic books including: economics of non-clearcutting management systems, economics of forest damage, risk analysis, inflation, environmental economics, capital budgeting, and regional economics. Add to this a micro-economics review, multiple-use and non-market good analysis, optimal capital management, benefit/cost analysis, timber supply and demand issues, appraisal and valuation, forest industry economics, and world forestry issues, and you have the most comprehensive forest economics text on the market. In addition to new and updated figures throughout the text, this newly-revised second edition provides an overview of important trends in the modern timber industry including advancements in engineered wood, international trade, global environmental issues, as well as community forestry and agroforestry.*
